

Urban Mobility and Mobility Services

Intelligent IT solutions are becoming increasingly important in urban traffic and are making it fit for the future. Mobility data is gathered and provided, to help drivers and logistics companies navigate their way into the city and in urban traffic. Mobile IT applications and platforms prepare this data to make it helpful and convenient for users. Saxony-Anhalt is getting mobility rolling for:

Urban Mobility

Mobility data here helps to make city traffic more intelligent. It helps one to find the best and fastest traffic route, no matter what means of transport one is using. It not only incorporates the existing traffic conditions but also short-term changes such as those caused by construction sites or accidents.
